Education

Symbiosis Institute of Design

B.Des, Industrial Design · 2017–2021

Advanced Design — Offsite

Cohort 2 · 2023

Awards

First Place — Almond Design

"Through the Looking Glass", 2021

Winner — boAt

Redesign Competition, 2021

Finalist — leManoosh

Drone for Kids, 2024

Skillset

Rhinoceros 3D
Fusion 360
Blender
Solidworks
Plasticity
KeyShot
Octane
Figma
Vizcom AI
Midjourney

About

Industrial designer with 6+ years of experience in consumer electronics, home appliances and robotics, combining rigorous product thinking with clear storytelling to deliver memorable, manufacturable experiences for both brands and users.

Experience

Independent

2024–2026

India & United States of America

— Innate Robotics (home robot): team of 3 with Future Unit on the full ID process — concept to CAD with DFM; own concept selected for development. Also created AI-powered visuals of the robot interacting with people across environments for their investor deck, contributing to securing funding.

— Tangible Robotics (home robot): team of 3 with Future Unit on the full ID process — concept to CAD with DFM, resolving clearance and engineering constraints; own concept selected for development. Helped define their product uniqueness, contributing to securing investment.

— Brewtal: developed a chai brewer from concept to manufacture, helping them break into the consumer electronics market for both home use and high-end cafes and restaurants.

— Leading and collaborating on AI wearable and domestic robotics projects with firms based in the United States.

CORE Experience

2022–2024

Bengaluru, India

— Led end to end product design for consumer devices from research and insights to CMF, CAD and factory ready handoff; developed the chest plate for RIA, a conversational robot.

— Worked closely with engineering and manufacturing teams to fine tune fit and assembly while balancing costs and deadlines.

— Created visual narratives, storyboards and design decks used in client pitches and stakeholder alignment across product, brand and leadership.

CORE Experience (Intern)

2022

Bengaluru, India

— Led a home appliance project for the full duration of the internship, independently developing a line of six products with manufacturing in mind, and oversaw manufacturing for two of them.

boAt (Intern)

2021

Bengaluru / Mumbai, India

— Contributed to accessories and audio product concepts aligned with brand language and tight mass market constraints; prepared production friendly surfaces, exploded views and documentation for cross functional teams.

— Produced visualization assets for audio consumer electronics for online marketplaces such as Amazon and Flipkart.

Selected Projects

[ErgoPlay](#)

Personal · 2024

— Designed and 3d-print manufactured a mouse that switches between ergonomic and gaming postures, balancing comfort, performance and cost; developed full CAD, internal architecture and prototypes to validate grip, button placement and assembly.

[ALTR](#)

Studio · 2023–2024

— Created a business-ready, modular desk system with interchangeable tiles for power, storage and accessories; defined product architecture, configuration logic and visual language to scale across SKUs and environments.

[Aakaar](#)

Community · 2023

— Designed a terracotta chess set reflecting contemporary India; led visualization and contributed to concept and narrative development, with 3D printed prototypes now moving toward manufacturing.
